

Meeting Campus Demands for Electronic Advising

Ferrilli Information Group (FIG) has enhanced the base eAdvising module in Colleague resulting in dramatic improvement in efficiency and accuracy.

Base eAdvising Module

A faculty member/advisor can only see the students that they have advisor relationships with. A department head or dean is not able to view all students in their department.

Student Ed Plans must be setup individually per student. No batch creation of plans is available.

No purging exists for eAdvising files

Unable to batch create Student Ed Plans to approve all the planned courses coming in from a track for specified terms, instead each student must be pulled up individually and the courses approved.

Enhanced eAdvising Solution

A faculty member/advisor can now view students by department

Plans/worksheets may now be batch loaded with a course block based on a saved list of students

A purge process is available to cleanup stagnate data in the e-advising files

A batch process is available to batch approve based on saved list and curriculum track

This custom workflow provides timely access to students' academic records in the planning process. Advisors and administrators now spend less time with paper, more time with students.
