

Registration Roadblock Removed

Student Active Restrictions is a custom WebAdvisor workflow that prevents the student, with active registration restrictions on record, from gaining access to registration forms in WebAdvisor.

- Provides "Hold" alert prior to beginning the registration process
- Speeds up the registration process
- Allows students to proactively see "Holds"
- Provides clear direction allowing Registration Hold issues to be resolved efficiently

When a student tries to register for classes and has an active restriction on record, they will be redirected to the custom Active Restrictions screen. The Active Restrictions screen will display the hold details and an instruction message the institution provides on the steps that need to be taken to resolve the restriction. Once the restriction is resolved the student will be able to register normally.
