

## Integrate 3rd Party Apps with your Student Information System

The Transport Management Interface (TMI) is an open architecture tool that works at the database level to facilitate two-way communications and integration between disparate databases and applications.

- Near Real Time Data Extraction and Normalization from Unidata to MS SQL, My SQL, and Oracle
- Merge Data from Yearly File Suites into a Single File
- Two way transactional communication via XML over SSL
- Works with native command line clients
- AES 128 Bit Encrypted File Transfer
- Works at the database level - it does not matter if you are Datatel, PeopleSoft, or Banner
- Works on Unix, Linux, and Windows
- Works with MS SQL Server, My SQL, Oracle, and Unidata

- Written in PERL
- Has the ability to write custom interfaces between disparate databases and applications
